Light QCD exotics at BESIII

Thursday, 20 July 2023 15:20 (20 minutes)

Using the world's largest samples of J/ψ and $\psi(3686)$ events produced in e^+e^- annihilation, BESIII is uniquely positioned to study light hadrons in radiative and hadronic charmonium decays. In particular, exotic hadron candidates including multiquark states, hybrid mesons and glueballs can be studied in high detail. Recent highlights on the light exotics searches, including the observation of an iso-scalar spin-exotic 1^{--} state $\eta(1855)$ in $J/\psi \rightarrow \gamma \eta \eta'$, the observation of $X(2600)$ in $J/\psi \rightarrow \gamma \pi^+ \pi^- \eta'$ and a PWA of $J/\psi \rightarrow \gamma \pi^+ \pi^- \eta'$, will be presented.
